From the trunk, open the small "doors" Reach in and twist to the left on the white "star" like knobs.
Remove those.
these here (Not my pic)

Then you will need to push from inside to release the entire lamp assembly.
You will need to release the post, shown on the left, from its capture point on the chassis, inside of the back of the car.
Squeeze the vertical electrical connector at the top and bottom to remove it.

Then you will see two or three Phillips screws, needed to remove the black plastic bulb carrier, to get at the bulbs.

Why do I have this feeling that something happened to the TT?
